

Overhead conveyors

From development to production CMAT handles all steps in-house. Overhead conveyor solution is especially user-friendly with low maintenance required. This system avoids any excessive concentration of crates at the packing station and facilitates a fast change of the crates types.

Overhead rope conveyor

A rope carries running trolleys on a suspended track, and is driven by one motor reduction unit. Equally spaced hooks or trays are used to suspend the loads (cardboard, crate ...). This conveyor can be combined with case former.

Specifications

- Light load until 30kg
- Closed track
- Trolleys (stainless or galvanized)
- Wheel (nylon, steel or stainless)
- Tray and hook (custom made)
- Device available for various applications

Overhead cable conveyor

A cable carries running trolleys on a suspended open track, and is driven by one motor-reduction unit. Equally spaced hooks or trays are used to suspend the loads (cardboard, crate,...) Special foodstuffs companies : all in stainless and can go through washing machine.

Specifications

- Light load until 30kg
- Opened stainless track
- Trolley all in stainless
- Wheel : stainless bearings + plastic wheel
- Tray and hook (custom made)
- Special agro food industry
